

WHAT TO DO WITH LATEX PAINT?

Latex (or water based) paint, if properly prepared, can be disposed with your regular waste.

Use one of these methods to prepare latex paint for disposal.

- Remove lids and let the paint air-dry. This will take time; so keep it out of children and pet's reach. When completely dry, replace lid and put with your waste.
- Mix an absorbent with the paint to make the paint a solid. Sawdust or kitty litter work well. When completely solid, replace lid and put with your waste.

TIP: If your waste is picked up from the curb you may want to contact your hauler to let him or her know the paint has been properly prepared for disposal.

NOTE: For Oil-based paint see Household Hazardous Waste Program
